

Pip — avatar build brief (Fotor AI, UGC avatar, animated, charm-ready)

Built for Fotor AI (sponsor). Fotor has the full pipeline in one place: a cartoon/AI avatar generator to create Pip, an AI animation generator for movement, and an AI talking avatar with lip-sync for the UGC clips.

The big idea

Pip is a trendy little charm that lives inside the app but looks exactly like a soft keychain you would clip to your bag in real life. So it has to work in two worlds: animated on screen now, and a physical collectible later, like the blind-box charm trend (Smiski, Sonny Angel, Labubu).

Character feel (the most important part)

Soft, fluffy and kid-like, but not a real animal or person. An original cartoon creature you cannot quite name. The point is comfort: it should feel huggable, gentle and safe, like a plush toy that came to life. Very cartoon, never realistic. Rounded everything, no sharp edges, no human features. If someone looks at Pip, they should feel calm and a little protective of it.

- **Form:** a round, fluffy blob creature. Soft fur texture, chubby, palm-sized charm proportions.
- **Species:** deliberately ambiguous. Not clearly a cat, dog or bear. Just Pip.
- **Face:** big soft gentle eyes, a tiny simple smile, optional small blush cheeks. Calm and friendly, never sharp or clever-looking.
- **Texture:** soft and fluffy, like brushed plush or velvet. This is what makes it feel safe and cuddly.
- **Charm detail:** a small keychain loop and clasp on top of the head, so it reads as a real bag charm. This ties the digital and physical versions together.

Colours (ZYMIX exact brand colours, no purple)

Pip now lives fully in ZYMIX's palette so it feels native to the app.

- **Body / fur:** ZYMIX lime green [#9EF745](#).
- **Soft glow / shading:** the ZYMIX gradient, light [#CDF94F](#) to deeper [#5FB52E](#), for a gentle rounded, plush look.
- **Tummy / cheeks / inner ears:** white [#FFFFFF](#) or very light [#F5F6F7](#) for softness and contrast.
- **Eyes / outline / mouth:** ink black [#111111](#).

- **Keychain loop:** simple silver/grey, or black #111111 to keep it clean.

Keep lime as the body, black only for the small features, white for the soft belly. That is the ZYMIX look exactly.

Step 1 — create Pip in Fotor (AI Cartoon / Avatar generator)

Paste this prompt:

"A cute original cartoon mascot charm called Pip. A round fluffy soft creature, lime green fur (hex 9EF745), white fluffy tummy and cheeks, big gentle eyes, tiny smile, soft and huggable like a plush toy. A small keychain loop and clasp on top of its head like a bag charm. Not a real animal, an original character. Soft cartoon style, plush fur texture, makes you feel safe and calm, no background, centred, collectible blind-box charm aesthetic."

Generate a few times and pick the softest, friendliest result. Lock that as your reference.

Step 2 — expression set (regenerate the same Pip)

- Idle / happy (resting face)
- Talking (mouth open, friendly)
- Thinking (eyes up, soft)
- Excited / celebrating (arms up) for "match found"
- Waving hello (for sign-in)
- Sad / oops (for empty states)

Step 3 — animate in Fotor (AI Animation generator)

- **Idle loop:** gentle 2 to 3 second loop. Soft bob and sway like a charm gently dangling, slow blink. Plays whenever Pip is on screen.
- **Reaction bursts:** short 1 to 2 second clips. A happy bounce with sparkles for a match, a little wiggle for celebration, a soft shrug for no results.
- **Charm touch:** a tiny dangle or swing on entry sells the "hanging in your bag" feel.

Step 4 — talking clips (Fotor AI Talking Avatar)

For UGC and in-app guidance, upload Pip plus a voice track and let Fotor lip-sync. Use this for Pip's greeting and tips.

Voice and personality (matches your ZAI instructions)

Warm, gentle, upbeat, brief, a little playful. Talks like a kind friend, never a help desk. Never more than two short sentences. Greeting: "Hi, I'm Pip. Tick the things you love and I'll find your people." On a match: names the shared interest and keeps it light and warm.

Technical specs for in-app use

- **Background:** transparent (PNG sequence, transparent video, or GIF/Lottie) so Pip floats over any screen.
- **Resolution:** export at 2x for crisp mobile (512x512 or larger).
- **Loop length:** keep idle loops 2 to 3 seconds so files stay light and the app stays fast.

Merch-ready from day one

- **Strong silhouette:** Pip should be recognisable as a plain black shape. Test it.
- **No fragile bits:** round everything so a physical charm would not snap.
- **Real keychain loop:** the loop you drew is also the real attachment point.
- **Colourways:** plan a small set (lime, white, pastel) so the physical version can be a collectible series.
- **Keep a vector version:** also save a clean flat vector of Pip, which is what a manufacturer needs for a moulded charm.
